

Features

- **Fast, 21ns Propagation Delay**
- **155uA (Typ.) Low Power Consumption**
- **Single-Supply Operation from +2.7V ~ +5.5V**
- **Low Offset Voltage: 5mV (Max.)**
- **Rail-to-Rail Input and Output**
- **CMOS/TTL-Compatible Output**
- **Internal Hysteresis for Clean Switching**

- **No Phase Reversal for Overdriven Inputs**
- **Operating Temperature: -40°C ~ +85°C**
- **Small Package:**

GS8740 Available in SOT23-5 and SC70-5 Packages

GS8741 Available in SOT23-5 and SC70-5 Packages

GS8742 Available in SOP-8 and MSOP-8 Packages

General Description

The GS8740 family are low-power, high-speed comparators with internal hysteresis, optimized for systems powered from a 3V or 5V supply. The device features high-speed response, low-power consumption, low offset voltage, and rail-to-rail input and output range. Propagation delay is 21ns (100mV overdrive), while supply current is 155uA per comparator. The internal input hysteresis eliminates output switching due to internal input noise voltage. The maximum input offset voltage is 5mV, and the operating range is from 2.7V to 5.5V.

All devices are specified for the temperature range of -40°C to +85°C. The GS8740 and GS8741 single are available in Green SC70-5 and SOT23-5 packages. The GS8742 Dual is available in Green SOP-8 and MSOP-8 packages.

Applications

- Line Receivers
- Battery-Powered Systems
- Threshold Detectors/Discriminators
- 3V/5V Systems
- Zero-Crossing Detectors
- Sampling Circuits

Pin Configuration

Figure 1. Pin Assignment Diagram

Absolute Maximum Ratings

Condition	Min	Max
Power Supply Voltage (V _{DD} to V _{SS})	-0.5V	+7.5V
Analog Input Voltage (IN+ or IN-)	V _{SS} -0.5V	V _{DD} +0.5V
PDB Input Voltage	V _{SS} -0.5V	+7V
Operating Temperature Range	-40°C	+85°C
Junction Temperature	+160°C	
Storage Temperature Range	-55°C	+150°C
Lead Temperature (soldering, 10sec)	+260°C	
Package Thermal Resistance (T_A=+25°C)		
SOP-8, θ _{JA}	125°C/W	
MSOP-8, θ _{JA}	216°C/W	
SOT23-5, θ _{JA}	190°C/W	
SC70-5, θ _{JA}	333°C/W	
ESD Susceptibility		
HBM	4KV	
MM	300V	

Note: Stress greater than those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions outside those indicated in the operational sections of this specification are not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Package/Ordering Information

MODEL	CHANNEL	ORDER NUMBER	PACKAGE DESCRIPTION	PACKAGE OPTION	MARKING INFORMATION
GS8740	Single	GS8740-CR	SC70-5	Tape and Reel,3000	8740
		GS8740-TR	SOT23-5	Tape and Reel,3000	8740
GS8741	Single	GS8741-CR	SC70-5	Tape and Reel,3000	8741
		GS8741-TR	SOT23-5	Tape and Reel,3000	8741
GS8742	Dual	GS8742-SR	SOP-8	Tape and Reel,4000	GS8742
		GS8742-MR	MSOP-8	Tape and Reel,3000	GS8742

Electrical Characteristics

(At $V_S = +5V$, $V_{CM} = 0V$, $C_L = 15pF$, and $T_A = +25^\circ C$, unless otherwise noted.)

PARAMETER	SYMBOL	CONDITIONS	GS8743/8744/8745			
			TYP	MIN	MAX	UNITS
INPUT CHARACTERISTICS						
Input Offset Voltage	V_{OS}	$V_{CM} = 0V$	0.4		5	mV

Application Note

Size

GS8740 family series comparators are low-power, high-speed and suitable for a wide range of general-purpose applications. The small footprints of the GS8740 family packages save space on printed circuit boards and enable the design of smaller electronic products. The GS8740 family interfaces directly to CMOS and TTL logics.

Power Supply Bypassing and Board Layout

GS8740 family series operates from a single 2.7V to 5.5V supply or dual $\pm 1.35V$ to $\pm 2.75V$ supplies. For best performance, a 0.1 μF ceramic capacitor should be placed close to the V_{DD} pin in single supply operation. For dual supply operation, both V_{DD} and V_{SS} supplies should be bypassed to ground with separate 0.1 μF ceramic capacitors.

Low Supply Current

The low supply current (typical 155 μA per channel) of GS8740 family will help to maximize battery life. They are ideal for battery powered systems.

Operating Voltage

GS8740 family operates under wide input supply voltage (2.7V to 5.5V). In addition, all temperature specifications apply from $-40^{\circ}C$ to $+85^{\circ}C$. Most behavior remains unchanged throughout the full operating voltage range. These guarantees ensure operation throughout the single Li-Ion battery lifetime

Rail-to-Rail Input

The input common-mode range of GS8740 family extends 100mV beyond the supply rails ($V_{SS}-0.1V$ to $V_{DD}+0.1V$). This is achieved by using complementary input stage. For normal operation, inputs should be limited to this range.

Internal Hysteresis

Because of noise or undesired parasitic feedback, high-speed comparators oscillate in the linear region. Oscillation tends to occur when the voltage on one input is at or equal to the voltage on the other input. The GS8740 family eliminates this undesired oscillation by integrating an internal hysteresis of 2.7mV.

The hysteresis in a comparator creates two trip points: one for the rising input voltage and one for the falling input voltage (Figure 1). The difference between two trip points is the hysteresis, while the average of two trip points is the offset voltage. When the comparator's input voltages are equal, the hysteresis effectively causes one comparator input voltage to move quickly past the other, thus taking the input out of the region where oscillation occurs.

Figure 1. Comparator's hysteresis and offset

External Hysteresis

Greater flexibility in selecting hysteresis is achieved by using external resistors. Hysteresis reduces output chattering when one input is slowly moving past the other.

Non-Inverting Comparator with Hysteresis

Figure 2. Non-Inverting Comparator with Hysteresis

A non-inverting comparator with hysteresis requires a two-resistor network, as shown in Figure 2 and a voltage reference (V_R) at the inverting input.

$$V_{TH} = \frac{R_G + R_F}{R_F} \times V_R$$

$$V_{TL} = \frac{R_G + R_F}{R_F} \times V_R - \frac{R_G}{R_F} \times V_{DD}$$

$$V_{HYS} = \frac{R_G}{R_F} \times V_{DD}$$

Inverting Comparator with Hysteresis

Figure 3. Inverting Comparator with Hysteresis

The inverting comparator with hysteresis requires a three-resistor network that is referenced to the comparator supply voltage (V_{DD}), as shown in Figure 3.

$$V_{TH} = \frac{R_{G2}}{R_{G1} \parallel R_F + R_{G2}} \times V_{DD}$$

$$V_{TL} = \frac{R_{G2} \parallel R_F}{R_{G2} \parallel R_F + R_{G1}} \times V_{DD}$$

$$V_{HYS} = \frac{R_{G1} \parallel R_{G2}}{R_{G1} \parallel R_{G2} + R_F} \times V_{DD}$$

Typical Application Circuits

Line Receiver

A Line Receiver using GS8740 family is shown in Figure 4. Resistors R_{G1} and R_{G2} set the bias point at the comparator's inverting input. R_{IN} should be same as $R_{G1} || R_{G2}$ to get a better match. GS8740 family detects the voltage of the Coax Line, and outputs logic high or logic low quickly with no glitch.

Figure 4. Line Receiver

IR Receiver

GS8740 family is an ideal candidate to be used as an infrared receiver shown in Figure 5. The infrared photo diode creates a current relative to the amount of infrared light present. The current creates a voltage across R_{IN} . When this voltage level cross the voltage applied by the voltage divider to the inverting input, the output transitions. Optional R_F provides additional hysteresis for noise immunity.

Figure 5. IR Receiver

Oscillator

A oscillator using GS8740 family is shown in Figure 6. Resistors R_{G1} and R_{G2} set the bias point at the comparator's inverting input. The period of oscillator is set by the time constant of R_C and C_{IN} . The maximum frequency is limited by the large signal propagation delay of the comparator. GS8740 family's low propagation delay guarantees the high frequency oscillation.

If $R_{G1}=R_{G2}=R_F$, then the frequency of the oscillator is:

$$f_{osc} = \frac{1}{2 \times \ln 2 \times R_C \times C_{IN}}$$
